

# CardiLink®

## Active Post Market Surveillance of Medical Devices

Remote surveillance of medical devices:

*„Your product is required to be ready for operation but is at the same time not in regular use.”*

- Save your employees time and energy with our remote services.
- We display the status of your devices in real time on a dashboard and we analyze your data for long-term monitoring and quality reports.
- You will be alerted about alarms and any occurring issues before the product is used on a patient.
- An additional benefit for you, is the Data Analytics of your product for clinical studies.

**CardiLink® creates a vendor neutral connected Ecosystem for Health and Safety Devices.**

**This makes CardiLink an enabler for service-driven business models for its B2B clients.**
